efficient inbound networks in the european automotive industry rely on a set of different transport concepts including milk runs understood as regularly scheduled pickup tours the complexity of designing such a mixed network makes decision support necessary in

this book we provide definitions mathematical models and a solution method for the milk run design problem and introduce indicators assessing the performance of established milk runs in relation to alternative transport concepts

for more than 20 years network world has been the premier provider of information intelligence and insight for network and it executives responsible for the digital nervous systems of large organizations readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce

knowledge and technology management in virtual organizations issues trends opportunities and solutions presents a collection of the most recent contributions in the areas of organization knowledge and technology management in the context of virtual enterprises this book contains important and in depth information on four dimensions semantic managerial technological and social the semantic dimensions covered in this book are ontological and organizational approaches concepts organizational models and knowledge management models in respect to managerial dimensions this book covers process management integration management relationship management process integration knowledge management technology integration management and information integration knowledge and technology management in virtual organizations issues trends opportunities and solutions presents the technological dimension by explaining the infrastructures and technologies to support technology and information integration standards and protocols lastly this title highlights the social dimension including human resources management human resources integration social issues social impact social requirements and communities of knowledge

the brain is an extremely energy consuming part of the body which makes it dangerously vulnerable to metabolic stress it s no wonder then that abnormalities of brain energy metabolism are becoming the usual suspects and a hallmark of many neurodegenerative diseases the socioeconomic burden of these alone begs for urgent measures to be taken for better understanding both fundamental and applied problems of neuroenergetics and neuroprotection for instance brain imaging reveals that the diseased brains of alzheimer s patients cannot efficiently utilize the vital brain fuel glucose the resulting energy deficit causes neuronal hyperactivity seizures and cognitive impairments administration of native energy substrates complementary to glucose is a logical and attractive in its simplicity approach in fighting the energy crisis in the brain the two closely related aspects of brain activity neuronal and metabolic are currently considered to be of utmost importance in both fundamental and applied neuroscience although recently the studies of both brain activity and metabolism in normal conditions under metabolic stress and in neurodegenerative diseases have

experienced significant progress their overlapping areas deserve further clarification by joint efforts from experts in such fields as 1 energy demands supplies and efficiency at the cellular level in neurons glial elements micro vessels and in the process of their coordinated interactions 2 specific roles of energy substrates in fine tuning of the demand supply mechanism in the condition of metabolic stress and 3 the macro level of energy homeostasis and dietary manipulations possible beneficial for neurodegenerative diseases the result of combining into a coherent whole the recent findings in these fields will hopefully bring forward a broader view and better understanding of the knowledge continuum which is under the threat of further fragmentation due to the unavoidable process of specialization in neuroscience current issue covers the three major groups of topics 1 the pros and cons of studies of neuronal activity using brain slice preparations 2 the role of particular energy substrates in metabolic support of neuronal activity 3 the macro level of energy homeostasis and the dietary manipulations that seem promising in prevention and correction of the diseases of brain energy metabolism

it bothers you keeps coming back to mind like a dream wont go away you read about the phenomenon and you wonder if it is really possible that you have flashbacks to a life you had lived before nahhhh but you search for answers you read about therapists who claim when they use hypnosis to probe into patients subconscious for causes of emotional problems that often they regress to previous life sometimes they speak in a different voice and tongue and are instructed to speak english is this possible can you believe what these therapists claim more than forty years ago mr socha read a book the search for bridey murphy by morey bernstein an amateur hypnotist it was about a colorado woman who was hypnotized who talked about a life she lived in the 1700s in cork ireland her name was bridey murphy the book created a sensation but reincarnation in the 1950s in america was considered too far out and not to be taken seriously the books popularity diminished and it is out of print although used bookstores grab all the copies they can get their hands on because people continue asking about it and copies do not stay on the shelves very long the author c joseph socha could not forget about bridey the question what if persisted imagine what it would be like to listen in as a therapist who hypnotizes a patient is suddenly talking to an entity in another lifetime and is witnessing a famous historical scene ancient rome the napoleonic wars moments of our revolutionary war an exciting idea you have an observer there now you communicate with him tell me what you see what is happening that is how promise began socha picked a historical period to write about he researched that period meticulously for details that matched accurately what we know of that period from our history books today he leafed through hundreds of yellowed aged pages of historical manuscripts he examined illustrations he had to feel that he was actually there to write realistically and what about the therapist how did he become one what did he experience the first time

in a therapy session that he encountered an entity in a previous lifetime did he always believe in reincarnation if not did it shock him the first time he was exposed to an actual regression case how did he hypnotize how about a case history that he could share with the writer these were questions that socha the writer struggled with he had to know how else could he write about it realistically the reader of promise will often wonder hey is this stuff fact or fiction it is fiction but the copy reads like an article like reporting facts accurate details about the period and the surroundings of that historical moment like providing mental snapshots of a moment visual writing something the author learned while working in the audio visual production industry the picture was all important but in a novel no actual pictures are provided so the writer produces descriptive movement you see what he sees and feel what takes place you can read the story aloud to someone and they will see in their own mind what is happening like watching a movie or tv play the period in history that the story about is especially important to people who live in the detroit area they have often walked the location sat beside the detroit river sensing its emotion calming effect and standing before the pontchartrain hotel that sits on the site that once was fort detroit if he has any imagination at all cant he feel how it was long ago when not this tall modern building stood before him but in his imagination the old fort detroit is there and surrounding the fort is the frontier what was it like what did it actually look like who lived in that fort you want to meet these people desperately because you feel the importance these are people struggling to exist and sometimes you might ev

a classical metastable state possesses a local free energy minimum at infinite sizes but not a global one this concept is phase size independent we have studied a number of experimental results and proposed a new concept that there exists a wide range of metastable states in polymers on different length scales where their metastability is critically determined by the phase size and dimensionality metastable states are also observed in phase transformations that are kinetically impeded on the pathway to thermodynamic equilibrium this was illustrated in structural and morphological investigations of crystallization and mesophase transitions liquid liquid phase separation vitrification and gel formation as well as combinations of these transformation processes the phase behaviours in polymers are thus dominated by interlinks of metastable states on different length scales this concept successfully explains many experimental observations and provides a new way to connect different aspects of polymer physics written by a leading scholar and industry expert presents new and cutting edge material encouraging innovation and future research connects hot topics and leading research in one concise volume

this book offers concise information on the properties of polymeric materials particularly those most relevant to physical chemistry and chemical physics extensive

updates and revisions to each chapter include eleven new chapters on novel polymeric structures reinforcing phases in polymers and experiments on single polymer chains the study of complex materials is highly interdisciplinary and new findings are scattered among a large selection of scientific and engineering journals this book brings together data from experts in the different disciplines contributing to the rapidly growing area of polymers and complex materials

how can the interior of the sun white dwarfs and other stars be studied by stellar seismology what can doppler imaging tell us about high degree pulsations what impact are ccd and infrared observations having on extending the cepheid and rr lyrae distance scale and how are other classes of pulsators providing independent checks of the distance scale these and many other critical questions are answered in this timely review of the dramatic advances made in pulsating star research in the last decade this survey collects together more than thirty comprehensive reviews and over one hundred summaries of research papers from the 139th iau colloquium held in victoria british columbia together these cover all aspects of recent developments in the field of variable star research and preview some of the exciting advances anticipated for the next decade this volume provides an essential review for graduate students and researchers
